(54) METHOD AND DEVICE FOR HTML FILE FOR WWW

(57)Abstract:

PROBLEM TO BE SOLVED: To provide the method and device for HTML(hypertext markup language) file generation for WWW(world wide web) which can handle prefromatted tags discriminatingly from normal tags at the time of the generation of an HTML file for WWW using a frame function.

SOLUTION: Under the control of a process control part 12, a preformatting process part 21 sets a preformat for parts indicated through an input part 11 and specifies, for example, a line or static (characters string) range through the ON/OFF operation of a button for preformat setting arranged on a screen, thereby setting the preformat within the range based upon the indication input. Namely, a flag (PRE flag) for the preformat is set for the whole specified parts or static range.
